Exp7

Aim: Perform OLAP operations such as Roll up, Drill down, Slice and Dice, Pivot on Datawarehouse.

Theory:

OLAP is an acronym for On Line Analytical Processing**.** Online Analytical Processing: An OLAP system manages large amount of historical data, provides Facilities for summarization and aggregation, and stores and manages information at different levels of granularity.

OLAP operations:

Slice: A slice is a subset of a multi-dimensional array corresponding to a single value for one or more members of the dimensions not in the subset.
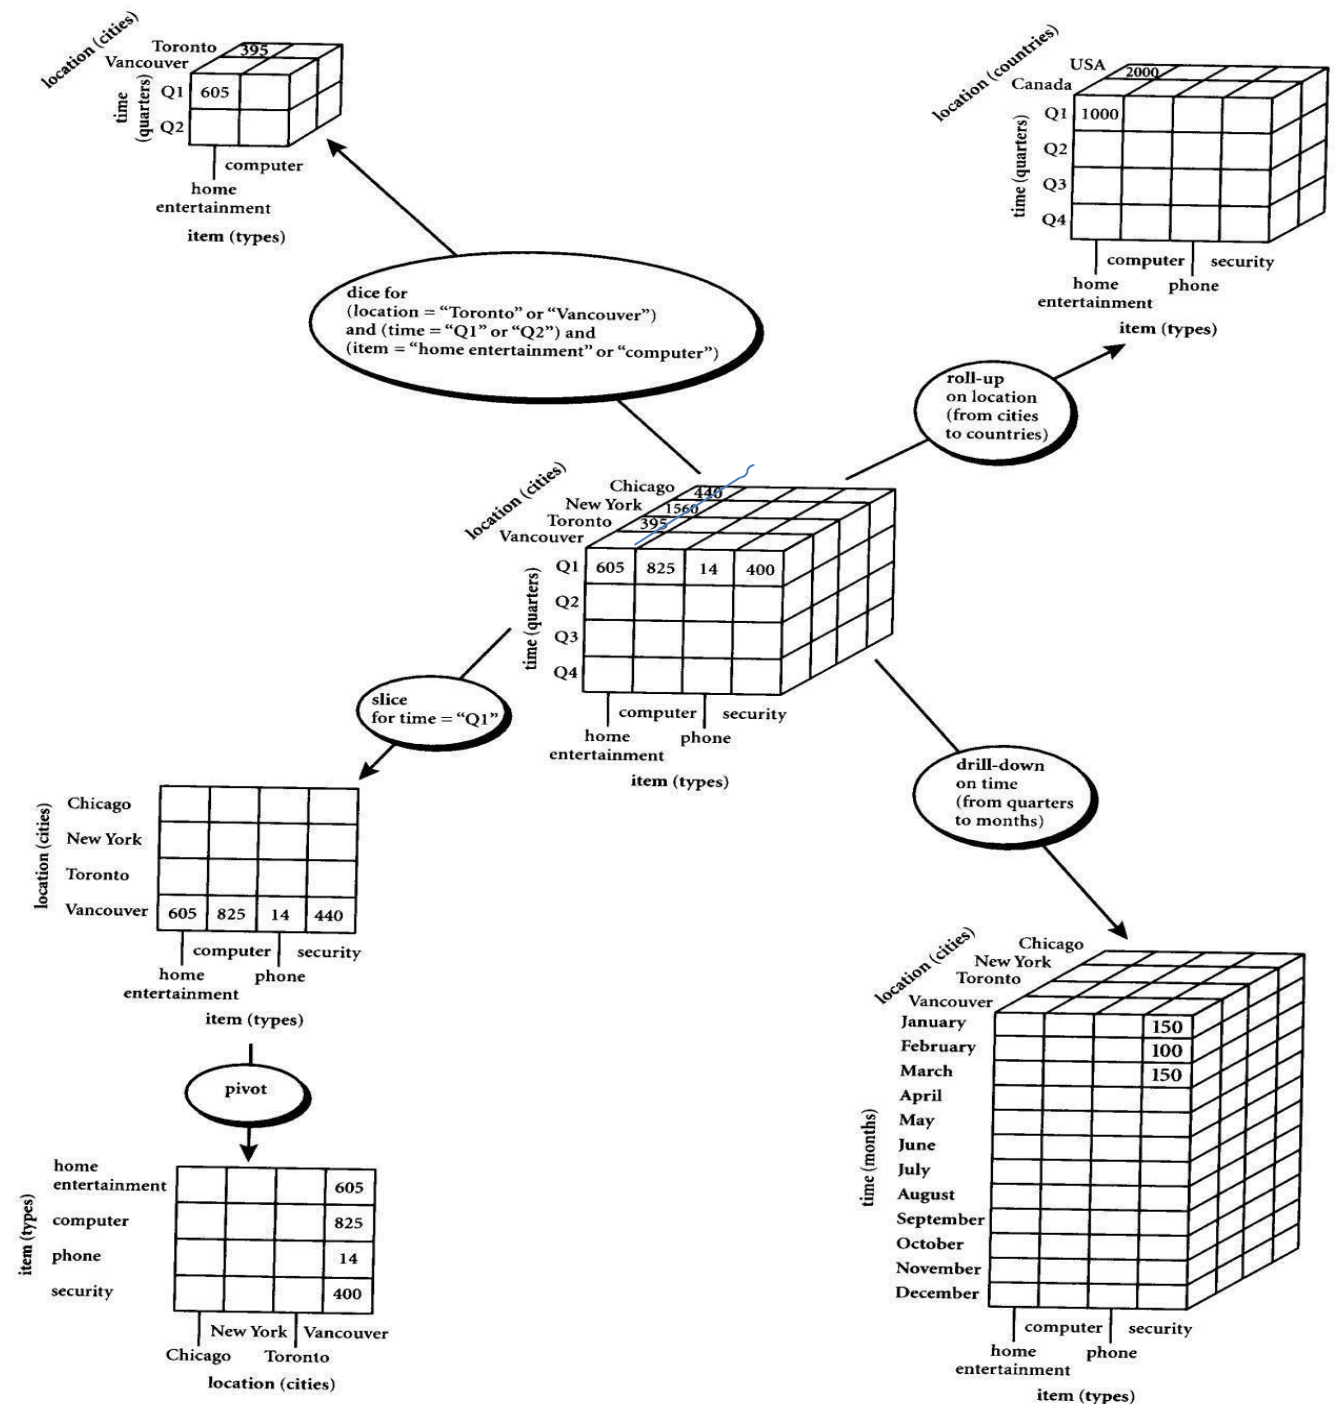

Dice: The dice operation is a slice on more than two dimensions of a data cube (or more than two consecutive slices).

Drill Down/Up: Drilling down or up is a specific analytical technique whereby the user navigates among levels of data ranging from the most summarized (up) to the most detailed (down).

Roll-up: A roll-up involves computing all of the data relationships for one or more dimensions.

To do this, a computational relationship or formula might be defined.

Pivot: To change the dimensional orientation of a report or page display.

EXERCISE 1

Consider a data Warehouse for a hospital, where there are three dimensions:

   (i)   Doctor

   (ii)   Patient

   (iii) Time

       With two measures

       (a) Count

       (b) Charge

       Where Charge is the fee that the Doctor charges a patient for a visit.

       Using the above example describe the following operations:

       (i)   Slice

       (ii)   Dice

       (iii)   Roll Up

       (iv)   Drill Down (v) Pivot

NOTE: Assume data according to the dimensions and measures and explore individual tasks diagrammatically.

Exercise 1 :

(Doctor)				
D4	250	150	400	100
D3	200	500	350	240
D2	200	280	180	170
D1				

(time)				
Q1	100	180	125	200
Q2	200	0	300	100
Q3	150	530	280	370
Q4	50	270	100	0
	P1	P2	P3	P4

(Patient)

Slice :-

D4	250	150	400	100
D3	300	500	350	240
D2	200	280	180	170
D1				
	100	180	125	200
	P1	P2	P3	P4

Dice :-

D2	200	280
D1		
Q1	100	180
Q2	200	0
	P1	P2

Roll Up :-

	P1	P2	P3	P4
	550	650	700	840
Q1	300	480	305	370
Q2	200	0	300	150
Q3	150	530	280	330
Q4	50	270	100	0

Drill Down :-

	P1	P2	P3	P4
D4	250	150	400	100
D3	300	500	350	240
D2	200	280	100	170
D1				
January	70	90	75	100
February	15	45	25	50
March	15	35	25	50
April	50	0	100	75
May	100	0	130	25
June	50	0	80	50
July	50	200	70	100
August	50	100	140	200
September	50	230	70	70
October	10	90	50	0
November	20	100	30	0
December	20	80	20	0

Pivot :-

	D1	D2	D3	D4
P1	100	200	300	250
P2	180	280	500	150
P3	25	180	350	400
P4	200	170	240	100

To create Pivot of Table using MS Excel

Follow these steps …

1. Start with M.S Excel.
2. In excel sheet create 4 columns PRODUCT, ORIGIN, DAY OF SALE, SOLD UNITS (FACT COLUMN).
3. Insert around fifty rows of data.
4. Save the table data.
5. Go to Insert Tab-> click on Pivot Table-> New work sheet-> Ok.
6. Right side you will find pivot table fields.

   It contains all columns of our table that we created.

   Select product in rows,

   Days in column,

   Unit sold in $\sum$ values.

   Later apply filter using Origin.

   Also, we can flip the rows & columns or combine together as rows only to see different views of same data.

   Dataset:

PRODUCT	ORIGIN	DAY OF SALE	SOLID UNITS
A	East	01-01-2023	8
B	Central	02-01-2023	4
C	Central	03-01-2023	2
D	Central	04-01-2023	5
E	West	05-01-2023	6
F	East	06-01-2023	9
G	Central	07-01-2023	9
H	Central	08-01-2023	1
